

**7<sup>th</sup> European Symposium on South American Camelids  
and 3<sup>rd</sup> European Meeting on Fibre Animals**

**June 12 - 14, 2017**

**Assisi, Italy**

**BOOK OF ABSTRACTS**

## Session 6 : Meat and fibre production, including shearing

Apelin, a new adipokine3 acting on hair follicle : an immunohistochemical study on ovine skin

Mercati F., Dall’Aglia C., Guelfi G., Scocco P., Ceccarelli P. pag. 66

ICAR – Guidelines for animal fibre production in alpaca and cashmere and new rules for the organization of fibre and fleece collection centers.

Antonini M., Pazzaglia I., Nocelli C., Lou Y., Thompson N. pag. 67

Technological characteristics of white and coloured Huacaya alpaca fibre in Apurimac, Peru

Corredor F.A., Bustinza V., Machaca V., Paucara V., Paucar R., Quispe E.C. pag. 68

The prickling issue in fabrics made of Camelid fibers. Possible mechanical or genetic solutions

Frank E. pag. 69

Determination of the optimal number of runs using AM2 dehairing technology in fibers of Patagonian goats (Patagonian cashmere).

Frank E. N., Hick M.V.H., Castillo M.F., Frondizi Seghetti D.G. pag. 70

Dehairing of alpaca fibres top with AM2 dehairing technology.

Frank E.N., Frondizi Seghetti D.G., Hick M.V.H., Castillo M.F., Burgos A., Cruz A. pag. 71

Modelacion de curvas de crecimiento de llamas Q’ara utilizando modelos de crecimiento no lineales.

Mamani-Cato R.H., Huanca T., Naveros M., Gallegos R. pag. 72

Genetic basis of early activation of hair follicle in cashmere goat: an approach with candidate genes. pag. 73

Pazzaglia I., Mercati F., Antonini M., La Terza A., Nocelli C., Pallotti S., Pediconi D., Renieri C.

## Session 8 : Free papers

Preliminary comparative analysis and localization of Bos taurus SNPs on Vicugna pacos chromosome 10 (VPA10)

Farfan K.A., Gutierrez G., Ponce de Leon F.A. pag. 74

## DEHAIRING OF ALPACA FIBRES TOP WITH AM2 DEHAIRING TECHNOLOGY.

Many classes of alpaca fibres contain a certain amount of coarse fibres, which are strong and stiff, and cause discomfort to the end users of alpaca fibre products. It is therefore desirable to separate the coarse alpaca fibres from the fine ones, as it should be done with llama fiber. With the AM2 dehairing technology developed in Argentina, various tests of Llama and Alpaca fiber (Frank *et al.*, 2009) were performed as well as in Australia (Wang *et al.*, 2008). In all cases, samples of raw fleeces were used. The possibility of using worsted (combed and intersected) arose some time ago. This paper reports trial results on alpaca dehairing using an AM2 technology dehairing machine. The diameters of alpaca fleece, dehaired alpaca fibres and removed alpaca fibres were analyzed; and the fibre lengths before and after dehairing were compared. In this dehairing assay, input included: Alpaca tape top 22 microns average fineness; 30% CV of fineness; Objectionable fiber w/w: 4.88%; N°/weight: 0.32; Fiber of >30 µm: 9.1%. Average fiber length (Barbe): 111.8 mm. One dehairing Product/Down (VI) was obtained: average fineness 21.9µm; 24% CV of fineness; Objectionable fiber w / w: 2.2%; N°/weight: 0.16; Fiber of >30 µm: 3.6% Average fiber length (Barbe): 83.0 mm; Hateur: 75.2mm (reduction length: 6.9 - 21.2%). Yield at end dehairing was 83.5%. The product can be processed with the worsted system (combing).
